

Please...

Please **don't email** me for course-related topics...

I may open them, but I **won't** reply...

Instead, DM me & TAs on **Canvas-ELMS** or **piazza**

Lab 1: Intro to D3

Most of you...

```
svg.append('circle')  
    //center of the circle  
    .attr('cx', width/2)  
    .attr('cy', height/2)  
    // radius of the circle  
    .attr('r', r)  
    // color of the circle  
    .style('fill', 'steelblue');
```

x 3

What if we have hundreds of circles...?

Lab 2: Building a basic bar chart

D3 calculates where to put the circles based on data for you

D3 binds data to a set of SVG elements (e.g. circles)

Additionally,

```
.style('stroke', 'black')  
.style('stroke-width', '5px') ←
```
